

Supreeth Kinnera

Full Stack Java Developer

Email: supreethh46@gmail.com | Contact No: 940-843-9312

PROFESSIONAL SUMMARY

- Senior Java Full Stack Developer with 5+ years of experience designing, developing, and deploying enterprise applications across Investment Management, Financial Services, Healthcare Supply Chain, Manufacturing, and Consulting domains.
- Expertise in building scalable, cloud-native applications using Java 21/17, Spring Boot, Spring Cloud, Spring Security, Hibernate, Spring Data JPA, and Microservices Architecture.
- Strong experience developing responsive and high-performance web applications using ReactJS, Angular, Redux, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Material UI, and RxJS.
- Proficient in designing and implementing RESTful APIs, GraphQL services, and distributed systems supporting enterprise integrations, real-time data processing, and cloud-native architectures.
- Hands-on experience developing event-driven applications using Apache Kafka and RabbitMQ to support asynchronous communication, workflow automation, and real-time business transactions.
- Experienced in designing and integrating Generative AI and Agentic AI solutions using OpenAI APIs, LangChain, LangGraph, Retrieval-Augmented Generation (RAG), and Vector Databases to automate business workflows and deliver intelligent enterprise applications.
- Extensive experience working with relational and NoSQL databases including Oracle, PostgreSQL, MongoDB, and Redis with expertise in database design, performance tuning, query optimization, and data modeling.
- Experienced in developing secure enterprise applications using Spring Security, OAuth 2.0, JWT, SAML, and Role-Based Access Control (RBAC) to meet business and regulatory requirements.
- Strong cloud expertise in AWS services including EC2, EKS, ECS, Lambda, S3, RDS, Cloud Watch, IAM, and Infrastructure as Code (IaC) using Terraform and AWS CDK.
- Skilled in containerization and orchestration technologies including Docker, Kubernetes, and OpenShift for highly available and scalable cloud deployments.
- Experienced in implementing CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI/CD, Maven, Gradle, and SonarQube to automate software delivery and quality assurance processes.
- Proficient in monitoring, logging, and observability tools including ELK Stack, Prometheus, Grafana, DataDog, Splunk, and CloudWatch to ensure application reliability and operational excellence.
- Strong understanding of Agile/Scrum methodologies with experience collaborating with business analysts, product owners, architects, stakeholders, and cross-functional teams throughout the Software Development Life Cycle (SDLC).

TECHNICAL SKILLS

Programming Languages	Java 21/17/11/8, Python, JavaScript, TypeScript, SQL
Backend Technologies	Spring Boot, Spring Cloud, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, Microservices, RESTful APIs, GraphQL, SOAP, Spring Batch
Frontend Technologies	ReactJS, Angular, Redux, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Material UI, RxJS
Databases	Oracle, PostgreSQL, SQL Server, MySQL, MongoDB, Redis, DynamoDB
Cloud Platforms	AWS (EC2, ECS, EKS, Lambda, S3, RDS, API Gateway, Cloud Watch, IAM)
Generative AI & LLMs	OpenAI GPT, Langchain, Langgraph, Vector Databases, LLM Integration
DevOps & CI/CD	Docker, Kubernetes, OpenShift, Jenkins, GitHub Actions, GitLab CI/CD, Maven, Gradle, Terraform, Helm, SonarQube
Monitoring & Logging	Prometheus, Grafana, ELK Stack, Splunk, DataDog, AWS Cloud Watch
Testing	JUnit, Mockito, Selenium, REST Assured, TestNG, Postman
Security	Spring Security, OAuth 2.0, JWT, SAML, RBAC
Version Control & Tools	Git, GitHub, GitLab, Bit bucket, JIRA, Confluence, IntelliJ IDEA, Eclipse, VS Code
Methodologies	Agile, Scrum, SDLC, TDD, CI/CD, Microservices Architecture, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

T Rowe Price, Baltimore, MD

Full Stack Java Developer

Oct 2025 – Present

- Designed and developed enterprise-grade investment management and wealth management applications using Java 21, Spring Boot, Spring Cloud, and Microservices architecture.
- Developed secure RESTful APIs and gRPC services supporting portfolio management, investment analytics, account management, and transaction processing systems.
- Built modern web applications using ReactJS, Angular, TypeScript, Redux, HTML5, and CSS3 delivering real-time financial dashboards and reporting platforms.
- Designed and developed event-driven applications using Apache Kafka enabling real-time portfolio updates, market data processing, trade execution workflows, and asynchronous business event processing.
- Developed scalable cloud-native microservices using Spring Boot, Spring Security, Hibernate, and Spring Data JPA.
- Designed and optimized Oracle, PostgreSQL, and MongoDB databases handling high-volume financial transactions and investment data.
- Implemented OAuth 2.0, JWT, RBAC, and secure API gateways to meet financial regulatory and security requirements.
- Developed Generative AI-powered investment research solutions using OpenAI GPT models, LangChain, and Retrieval-Augmented Generation (RAG) frameworks to provide portfolio insights, market trend analysis, and intelligent investment recommendations.
- Deployed applications on AWS using ECS, EKS, Lambda, S3, RDS, CloudWatch, and IAM services.
- Containerized applications using Docker and Kubernetes, implementing autoscaling, rolling deployments, and high-availability configurations.
- Built AI-driven conversational assistants and agentic workflows leveraging LangGraph, OpenAI APIs, and AWS Bedrock to automate analyst queries, investment research tasks, and portfolio performance reporting.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, Maven, Gradle, SonarQube, and Terraform.
- Implemented monitoring, logging, and distributed tracing using Prometheus, Grafana, ELK Stack, DataDog, and Splunk.
- Developed comprehensive testing frameworks using JUnit, Mockito, REST Assured, Selenium, and JMeter.
- Collaborated with portfolio managers, business analysts, and enterprise architects to deliver scalable investment management platforms.

Environment: Java 21, Spring Boot, Spring Cloud, ReactJS, Angular, Kafka, RabbitMQ, OpenAI, Oracle, PostgreSQL, MongoDB, Redis, Elasticsearch, AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Prometheus, Grafana, ELK, DataDog, Splunk.

Medline, Northfield, IL

Full Stack Java Developer

Aug 2024 – Sep 2025

- Developed cloud-native enterprise applications supporting medical product distribution, inventory management, procurement operations, warehouse management, and order fulfillment using Java 17, Spring Boot, Spring Cloud, and Microservices architecture.
- Designed and developed scalable Microservices using Spring Boot, Spring Data JPA, Hibernate, and RESTful APIs to support inventory tracking, product lifecycle management, procurement workflows, and supply chain operations.
- Built responsive Single Page Applications (SPA) using ReactJS, Redux Toolkit, TypeScript, HTML5, CSS3, and Material UI for inventory visibility, product catalog management, warehouse operations, and order processing systems.
- Designed and implemented RESTful APIs and GraphQL services for seamless integration with ERP systems, procurement platforms, warehouse management systems, and third-party logistics providers.
- Developed event-driven applications using Apache Kafka, RabbitMQ, AWS SQS, and SNS for real-time inventory synchronization, shipment tracking, order processing, and vendor communication workflows.
- Integrated Oracle, MongoDB, IBM DB2, and Redis databases to support high-volume inventory transactions, product catalogs, procurement records, and warehouse operational data.
- Implemented Redis caching and database optimization techniques to improve application performance and reduce API response times for inventory and order management applications.
- Developed serverless solutions using AWS Lambda and AppSync to automate inventory updates, shipment notifications, warehouse events, and supply chain business processes.
- Implemented secure authentication and authorization mechanisms using Spring Security, OAuth 2.0, JWT, and Role-Based Access Control (RBAC) to protect enterprise applications and sensitive business data.
- Automated infrastructure provisioning and environment setup using Terraform and AWS CDK following Infrastructure as Code (IaC) best practices.

- Deployed and managed applications on AWS services including EC2, EKS, S3, RDS, Lambda, Cognito, AppSync, CloudWatch, and IAM ensuring scalability, reliability, and high availability.
- Containerized applications using Docker and orchestrated deployments using Kubernetes/OpenShift implementing rolling deployments, auto-scaling, and zero-downtime release strategies.
- Built and maintained CI/CD pipelines using Jenkins, Maven, Gradle, GitHub Actions, and SonarQube to automate build, testing, code quality validation, and deployment processes.
- Developed unit, integration, and end-to-end test cases using JUnit, Mockito, Selenium, REST Assured, and Postman to ensure application quality and reliability.
- Implemented centralized logging, monitoring, and alerting solutions using ELK Stack, Prometheus, Grafana, and AWS CloudWatch for proactive system monitoring and incident management.
- Collaborated with business analysts, supply chain managers, procurement teams, warehouse operations stakeholders, and product owners to gather requirements and deliver scalable business solutions.
- Participated in Agile/Scrum ceremonies including sprint planning, backlog grooming, daily stand-ups, code reviews, release planning, and production support activities.
- Performed root cause analysis, performance tuning, production issue resolution, and application optimization to improve system stability and operational efficiency.

Environment: Java 17, Spring Boot, Spring Cloud, Spring Security, Hibernate, Spring Data JPA, Microservices, ReactJS, Redux, TypeScript, HTML5, CSS3, Material UI, REST APIs, GraphQL, Oracle, MongoDB, Redis, Apache Kafka, RabbitMQ, AWS, Docker, Kubernetes, Terraform, AWS CDK, Jenkins, Maven, GitHub Actions, SonarQube, JUnit, Agile, Scrum

Ernst & Young, IND

Java Developer

Jan 2020 – Aug 2023

- Developed and modernized enterprise applications using Java 11/17, Spring Boot, Spring Cloud, Hibernate, and Spring Data JPA as part of large-scale cloud transformation and modernization initiatives.
- Designed and implemented RESTful APIs and GraphQL services to enable seamless communication between enterprise applications, third-party systems, and cloud-based platforms.
- Built responsive front-end applications using Angular, TypeScript, HTML5, CSS3, Bootstrap, and RxJS for enterprise users and business stakeholders.
- Implemented service discovery, centralized configuration, circuit breakers, and fault-tolerance patterns using Spring Cloud components.
- Developed event-driven applications using Apache Kafka and RabbitMQ to support real-time data processing, enterprise integrations, and asynchronous business workflows.
- Created secure authentication and authorization frameworks using Spring Security, OAuth 2.0, JWT, and SAML to meet enterprise compliance standards.
- Designed and optimized PostgreSQL and Oracle database schemas, stored procedures, and indexing strategies for high-volume transactional systems.
- Supported cloud migration and digital transformation initiatives by migrating on-premise applications and services to AWS cloud environments.
- Developed batch processing solutions using Spring Batch for regulatory reporting, data reconciliation, and large-scale data migration activities.
- Containerized applications using Docker and orchestrated deployments through Kubernetes to improve scalability and availability.
- Automated infrastructure provisioning using Terraform and deployed applications on AWS services including EC2, EKS, S3, Lambda, RDS, and IAM.
- Built CI/CD pipelines using Jenkins, Maven, GitLab CI/CD, and SonarQube, enabling automated testing and deployment processes.
- Implemented monitoring and observability using Prometheus, Grafana, ELK Stack, and DataDog for proactive performance management.
- Developed unit and integration tests using JUnit, Mockito, Selenium, and REST Assured to maintain application quality and reliability.
- Participated in Agile/Scrum ceremonies including sprint planning, backlog grooming, code reviews, and release management.

Environment: Java 17, Spring Boot, Spring Cloud, Angular, TypeScript, REST APIs, GraphQL, gRPC, PostgreSQL, Oracle, RabbitMQ, Kafka, AWS, Docker, Kubernetes, Terraform, Jenkins, Maven, JUnit, Mockito, ELK, Prometheus, Grafana.

EDUCATION

Master of Information technology and Management

University of Belhaven

Aug 2023 – April 2025

Bachelors in Information Technology

Vasavi college of engineering

Aug 2016 – July 2020
